HOW TO USE THE PROTOTYPE

What is this study about?

This study explores how health-tracking applications can ask better monthly check-in questions. You will compare two mental-health check-in methods:

- **Rule-based** — questions follow predefined branching logic based on the user's answers.
- **AI/LLM-based** — an AI model interprets the user's health profile and generates more personalised, context-aware questions.

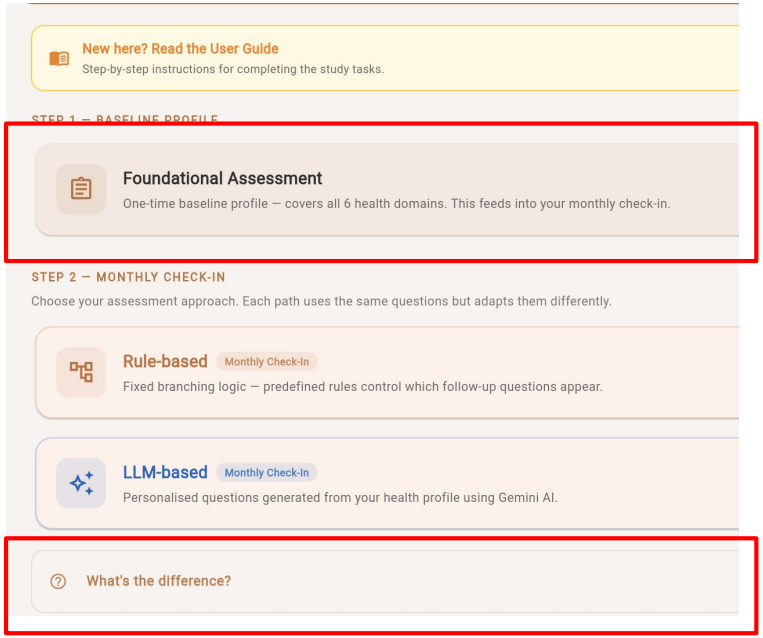
This guide explains how to use the prototype. After completing both methods, you will share your feedback through the survey.

For more information about the research, please read the explanatory statement. If you have any questions, contact the research team at muhrec@monash.edu.

STEP 1: Open the Prototype

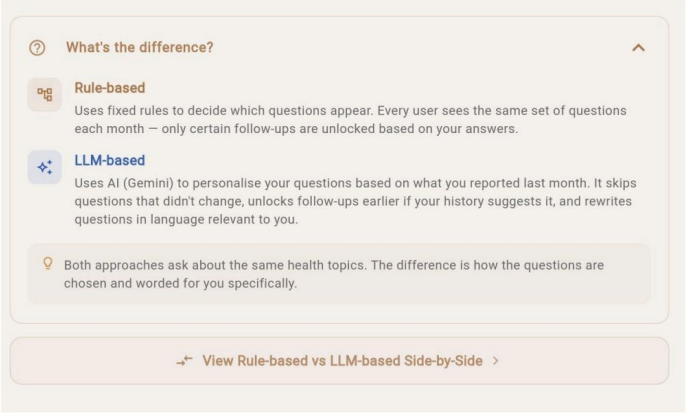
Persona

- **Name:** Sophie
- **Age:** 24
- **Gender:** Female
- **Background:** International student (Asian)
- **Occupation:** University student
- **Month 1 Mental Health Risk:** Mild
- **Key notes:** Reported low mood on several days; no functional impact reported; isolation score was low and stable



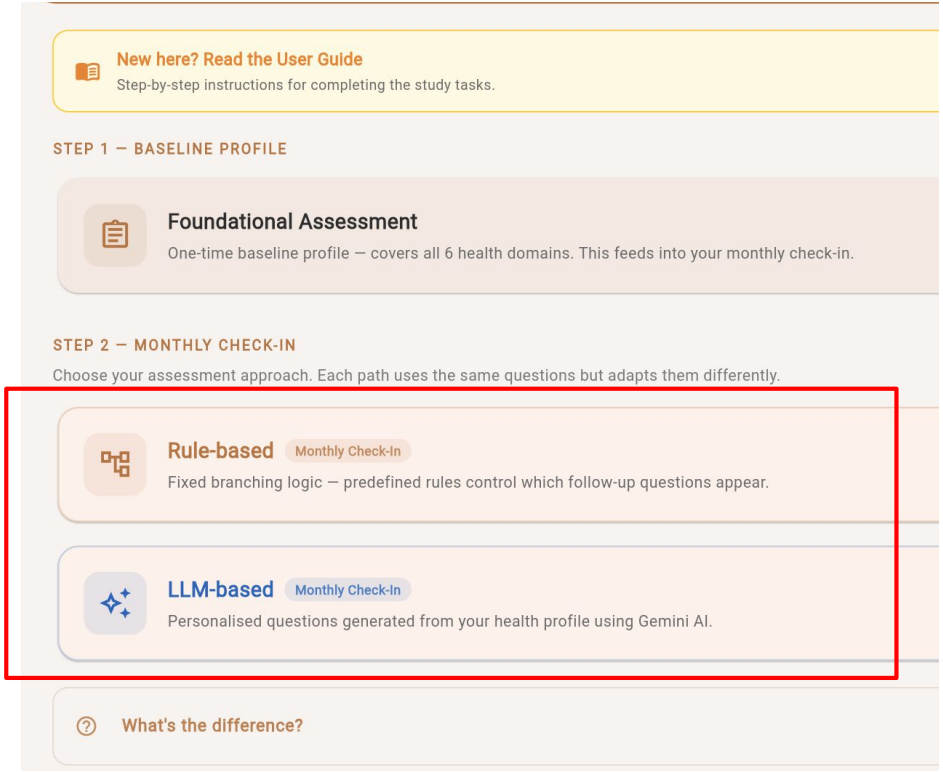
1. Open the prototype link. You will see the home screen with two Monthly Check-In options **(Rule-based and LLM-based).**

2. You do not need to complete the Foundational Assessment. It has already been pre-filled using **Sophie's** persona.



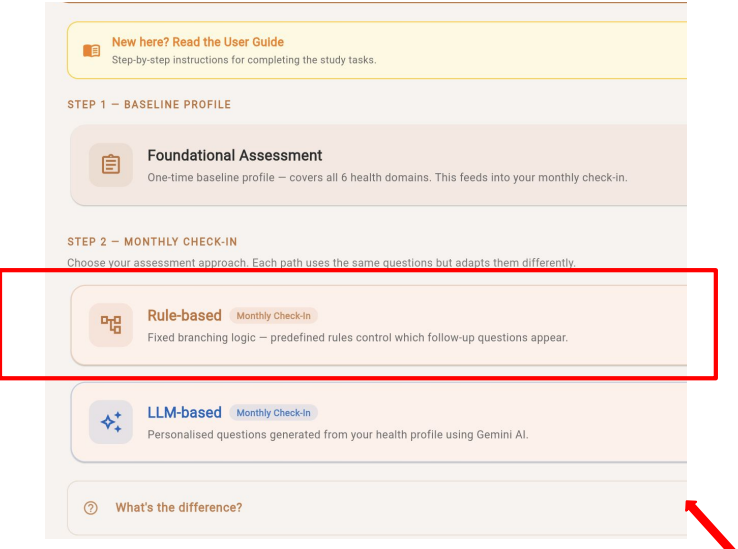
3. Tap **"What's the difference?"** to understand how the two methods differ.

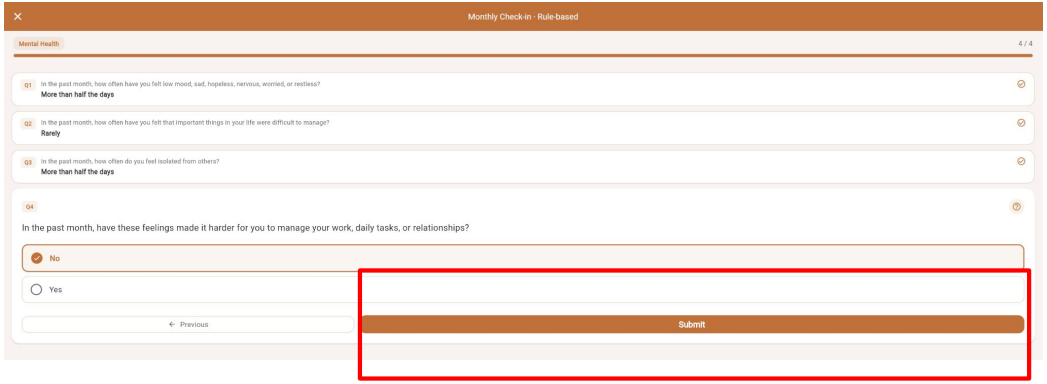
STEP 2 : Complete Both Monthly Check-Ins

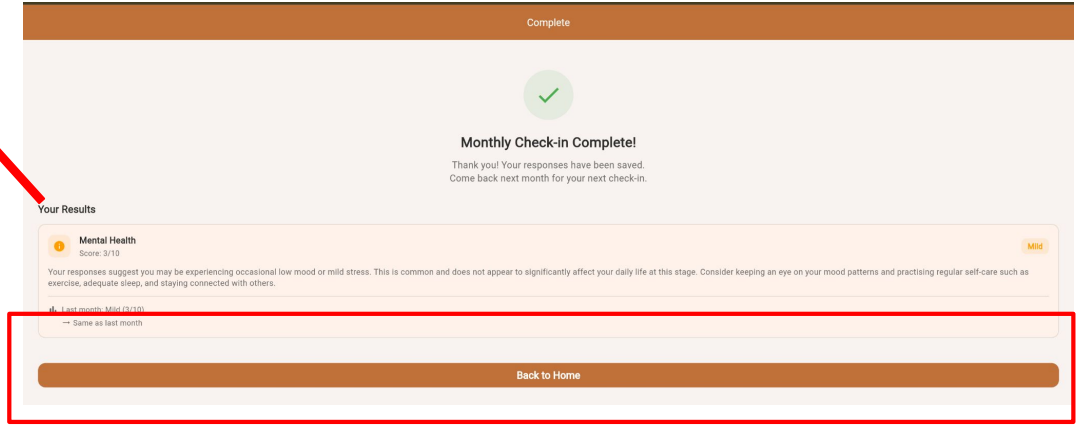


1. First, tap **Rule-based Monthly Check-In** on the home page.
2. Answer all questions as if you are **Sophie**.
3. After the last question, tap **Submit**.
4. When the completion screen appears, tap **Back to Home.**
5. Then tap **LLM-based Monthly Check-In** and complete it in the same way.

STEP 3: Return to the Survey







After completing both methods, return to the survey and answer the feedback questions about:

- **Clarity** — Were the questions easy to understand?
- **Quality** — Were the questions well-formed and meaningful?
- **Relevance** — Were the questions relevant to Sophie's health context?
